

CONTENTS IN DETAIL

INTRODUCTION

xvii

PART I AN INTRODUCTION TO SPAM FILTERING

| | | |
|--|---|-----------|
| 1 | THE HISTORY OF SPAM | 3 |
| The Definition of Spam | 4 | |
| The Very First Spam | 4 | |
| Spam: The Early Years | 7 | |
| Jay-Jay's College Fund | 7 | |
| The Jesus Spam | 9 | |
| Canter & Siegel | 10 | |
| Cancelmoose | 13 | |
| Jeff Slaton, the "Spam King" | 14 | |
| "Krazy" Kevin Lipsitz | 15 | |
| Stanford Wallace, Cyber Promotions | 15 | |
| Floodgate—The First Spamware | 16 | |
| Other Significant Events in 1995 | 16 | |
| War Waged on Spam | 17 | |
| Spamhaus | 17 | |
| Unsolicited Commercial Email | 19 | |
| Spam Out of Control | 19 | |
| 1998, 1999, and 2000: Three Years of War on Spam | 20 | |
| Network Solutions | 22 | |
| 2001 to the Present: Exponential Spam Growth | 22 | |
| Final Thoughts | 23 | |
| 2 | HISTORICAL APPROACHES TO FIGHTING SPAM | 25 |
| Primitive Language Analysis | 26 | |
| Blacklisting | 27 | |
| Propagation and Maintenance Problems | 28 | |
| Heuristic Filtering | 29 | |
| Brightmail | 29 | |
| SpamAssassin | 30 | |
| Drawbacks to Heuristic Filtering | 31 | |
| Maintenance Headaches | 31 | |
| Scoring | 32 | |

| | |
|--|----|
| Whitelisting | 32 |
| A Little Too Effective | 32 |
| Forgeries | 33 |
| Challenge/Response | 34 |
| Problems with Challenge/Response | 34 |
| Throttling | 35 |
| TarProxy | 35 |
| Other Throttling Tools | 36 |
| Collaborative Filtering | 37 |
| Address Obfuscation | 38 |
| New Standards | 39 |
| Authenticated SMTP | 39 |
| Sender Policy Framework | 40 |
| Litigation | 41 |
| Spammer Fingerprinting | 43 |
| Intellectual Property | 44 |
| Final Thoughts | 44 |

3 LANGUAGE CLASSIFICATION CONCEPTS 45

| | |
|---|----|
| Understanding Accuracy | 46 |
| Machine Learning | 46 |
| Concept Learning | 47 |
| Using Language Classification to Fight Spam | 47 |
| Training | 48 |
| Statistical Filtering and Bayesian Analysis | 49 |
| Components of a Language Classifier | 49 |
| The Historical Dataset | 50 |
| The Tokenizer | 51 |
| The Analysis Engine | 53 |
| Providing Feedback | 54 |
| Training | 55 |
| Train-Everything (TEFT) | 55 |
| Train-on-Error (TOE) | 56 |
| Train-Until-Mature (TUM) | 56 |
| Train-Until-No-Errors (TUNE) | 57 |
| When to Train | 57 |
| An Example of a Filter Instance | 58 |
| Step 1: Tokenize the Message | 58 |
| Step 2: Build a Decision Matrix | 59 |
| Step 3: Evaluate the Decision Matrix | 59 |
| Step 4: Train the Message | 60 |
| Step 5: Correct Errors | 60 |
| Efficacy of Statistical Filtering | 60 |
| The Future of Language Classification | 61 |
| The Sovereignty of Statistical Filtering | 61 |
| Final Thoughts | 62 |

STATISTICAL FILTERING FUNDAMENTALS

| | |
|--|----|
| An Imperfect Solution | 64 |
| Building a Historical Dataset | 65 |
| Corpus Feeding | 65 |
| Starting from Scratch | 66 |
| Correcting Errors | 67 |
| The Tokenizer and Calculating Token Values | 68 |
| Single-Corpus Tokens | 70 |
| A Biased Filter | 71 |
| Hapaxes | 71 |
| Final Product | 72 |
| The Analysis Engine | 72 |
| Sorting | 73 |
| Statistical Combination | 74 |
| Bayesian Combination (Paul Graham) | 75 |
| Bayesian Combination (Brian Burton) | 76 |
| Robinson's Geometric Mean Test | 78 |
| Fisher-Robinson's Inverse Chi-Square | 79 |
| Improvements to Statistical Analysis | 80 |
| Improving the Decision Matrix | 80 |
| Improvements to Tokenization | 81 |
| Statistical Sedation | 81 |
| Iterative Training | 82 |
| Learning New Tricks | 83 |
| Final Thoughts | 83 |

**PART II
FUNDAMENTALS OF STATISTICAL FILTERING****DECODING: UNCOMBOBULATING MESSAGES**

| | |
|---------------------------------|----|
| Introduction to Encoding | 88 |
| Decoding | 88 |
| Message Body Encodings | 89 |
| Quoted-Printable Encoding | 91 |
| Base64 Encoding | 91 |
| Custom Encodings | 92 |
| Message Header Encodings | 92 |
| HTML Encodings | 93 |
| Message Actualization | 94 |
| Supporting Software | 95 |
| Final Thoughts | 95 |

6**TOKENIZATION: THE BUILDING BLOCKS OF SPAM****97**

| | |
|--|-----|
| Tokenizing a Heuristic Function | 98 |
| Basic Delimiters | 98 |
| Redundancy | 99 |
| Other Delimiters | 100 |
| Exceptions | 101 |
| Token Reassembly | 101 |
| Degeneration | 102 |
| Header Optimizations | 103 |
| URL Optimizations | 104 |
| HTML Tokenization | 105 |
| Word Pairs | 107 |
| Sparse Binary Polynomial Hashing | 108 |
| Internationalization | 108 |
| Final Thoughts | 109 |

7**THE LOW-DOWN DIRTY TRICKS OF SPAMMERS****111**

| | |
|---|-----|
| Successful Filtering | 112 |
| No More Headaches | 112 |
| A Weak Link in Statistical Filters? | 113 |
| Attacks on Tokenizers | 113 |
| Encoding Abuses | 114 |
| Header Encodings | 114 |
| Hypertextus Interruptus | 115 |
| ASCII Spam | 117 |
| Text-Splitting | 119 |
| Table-Based Obfuscation | 121 |
| URL Encodings | 123 |
| Symbolic Text | 124 |
| Just Plain Dumb | 124 |
| Attacks on the Dataset | 125 |
| Mailing List Attacks | 126 |
| Bayesian Poisoning | 127 |
| Empty but Not Empty Probes | 130 |
| Attacks on the Decision Matrix | 132 |
| Image Spams | 132 |
| Random Strings of Text | 134 |
| Word Salad | 135 |
| Directed Attacks | 137 |
| Final Thoughts | 139 |

8**DATA STORAGE FOR A ZILLION RECORDS****141**

| | |
|------------------------------|-----|
| Storage Considerations | 142 |
| Disk Space | 142 |
| Speed | 142 |

| | |
|--|-----|
| Locking | 143 |
| Portability | 143 |
| Statefulness | 143 |
| Recovery | 143 |
| I/O Contention | 144 |
| Random-Access Features | 144 |
| Ease of Use | 144 |
| Storage Framework | 145 |
| Third-Party Storage Solutions | 147 |
| Stateless Database Implementations | 147 |
| Stateful SQL-Based Solutions | 149 |
| Peter Graf's PBL ISAM Library | 151 |
| SQLite | 153 |
| Proprietary Implementations | 155 |
| Final Thoughts | 155 |

9 SCALING IN LARGE ENVIRONMENTS 157

| | |
|--|-----|
| Requirements Assessment | 158 |
| Total Disk Space Requirements | 159 |
| Total Processing Power | 161 |
| Parallelization versus Serialization | 164 |
| Operating System Requirements | 164 |
| High Availability | 165 |
| I/O Bandwidth Requirements | 166 |
| Features | 166 |
| End-User Support | 167 |
| Sizing Machine Capacity | 167 |
| General Resource Planning | 168 |
| Assessing Resource Utilization | 169 |
| Building a Distributed Model | 170 |
| Round-Robin Distributed Networking | 170 |
| Distributed BGP Networking | 172 |
| Final Thoughts | 174 |

PART III ADVANCED CONCEPTS OF STATISTICAL FILTERING

10 TESTING THEORY 177

| | |
|---------------------------------|-----|
| The Challenge of Testing | 178 |
| Message Continuity | 178 |
| Archive Window | 179 |
| Purge Simulation | 180 |
| Interleave | 181 |
| Corrective Training Delay | 181 |

| | |
|---|-----|
| Types of Simulations | 181 |
| Measuring the Accuracy of a Specific Filter | 182 |
| Test Criteria | 182 |
| Performing the Test | 183 |
| Measuring Adaptation in Chaotic Environments | 185 |
| Test Criteria | 185 |
| Performing the Test | 186 |
| Testing the Effectiveness of Multiple Filters | 187 |
| Test Criteria | 188 |
| Performing the Test | 189 |
| Comparing Features in a Single Filter | 191 |
| Test Criteria | 191 |
| Performing the Test | 192 |
| Testing Caveats | 193 |
| Corrective Training | 193 |
| Purge Simulations | 194 |
| Test Messages | 194 |
| Presuppositions | 195 |
| Final Thoughts | 195 |

11 CONCEPT IDENTIFICATION: ADVANCED TOKENIZATION 197

| | |
|--|-----|
| Chained Tokens | 198 |
| Case Study Analysis | 199 |
| Pattern Identification | 200 |
| Differentiation | 201 |
| HTML Classification | 202 |
| Contextual Analysis | 203 |
| Other Uses | 204 |
| Administrative Concerns | 205 |
| Supporting Data | 206 |
| Summary | 207 |
| Sparse Binary Polynomial Hashing | 207 |
| Supporting Data | 209 |
| Summary | 210 |
| Karnaugh Mapping | 210 |
| Final Thoughts | 213 |

12 FIFTH-ORDER MARKOVIAN DISCRIMINATION 215

| | |
|--|-----|
| Markov's Great Advance | 216 |
| Hidden Markov Models (HMMs) | 218 |
| Using Markov Models to Model Text | 219 |
| Classic Bayesian Spam Filter | 219 |
| Bayesian versus Markovian Classification | 222 |
| Storage Concerns | 225 |
| Purging Old Data | 226 |

| | |
|--|-----|
| Floating-Point Renormalization and Underflow | 226 |
| Final Thoughts | 226 |

13 INTELLIGENT FEATURE SET REDUCTION 227

| | |
|--------------------------------------|-----|
| Calibration Algorithms | 228 |
| Bayesian Noise Reduction (BNR) | 231 |
| Instantiation Phase | 232 |
| Training Phase | 233 |
| Dubbing Phase | 234 |
| Examples | 236 |
| End Result | 239 |
| Efficacy | 239 |
| Final Thoughts | 240 |

14 COLLABORATIVE ALGORITHMS 241

| | |
|------------------------------------|-----|
| Message Inoculation | 242 |
| Supporting Data | 246 |
| External Inoculation | 246 |
| Classification Groups | 247 |
| Collaborative Neural Meshes | 248 |
| Neural Declustering | 249 |
| Machine-Automated Blacklists | 250 |
| Streamlined Blackhole List | 251 |
| Weighted Private Block List | 252 |
| Distributed Attacks | 252 |
| Filters That Fight Back | 252 |
| Fingerprinting | 253 |
| Probing | 253 |
| Automatic Whitelisting | 253 |
| URL Blacklisting | 255 |
| Minefields | 256 |
| Final Thoughts | 256 |

APPENDIX SHINING EXAMPLES OF FILTERING 257

| | |
|--------------------------------------|-----|
| POPFile: The POP3 Proxy | 258 |
| About POPFile | 258 |
| Accuracy | 259 |
| Interview with the Author | 260 |
| SpamProbe: A Modified Approach | 261 |
| About SpamProbe | 261 |
| Accuracy | 262 |
| Interview with the Author | 262 |

| | |
|-----------------------------------|-----|
| TarProxy: IANA Spam Filter | 264 |
| About TarProxy | 264 |
| Accuracy | 264 |
| Interview with the Author | 265 |
| DSPAM: A Large-Scale Filter | 266 |
| About DSPAM | 266 |
| Accuracy | 267 |
| Interview with the Author | 268 |
| The CRM114 Discriminator | 270 |
| About CRM114 | 270 |
| Under the Hood | 271 |
| Accuracy | 272 |
| Interview with the Author | 272 |
