

# INDEX

## Symbols

- { } (braces)
  - for function contents, 18
  - and object properties, 9
- == (double equals operator), 5
- === (triple equals operator), 5
- [ ] (square brackets)
  - for array literals, 10
  - for property access, 11–12
- [[ ]] (double-square-bracket notation), 17
- \_ (underscore), in property name prefix, 38, 80

## A

- accessor properties, 37–38
  - attributes, 41–43
  - creating, 42–43
- adding properties, 8
- anonymous functions, 20, 80
- apply() method, 27, 75
- arguments, functions as, 20
- arguments object, 21
- arity, 21
- Array built-in type, 8
- Array.isArray() method, 13–14
- array literals, 9–10
- Array.prototype, modifying, 62
- arrays
  - identifying, 13–14
  - passing to apply(), 27
- assignment expressions, 18
- attributes of properties, 38–44
  - accessor properties, 41–43
  - data properties, 40–41
- autoboxing, 14

## B

- bind() method, 28
- Boolean object, 3, 15–16
- Boolean primitive wrapper type, 14–15
- braces ({ })
  - for function contents, 18
  - and object properties, 9
- bracket notation, for property access, 11–12
- built-in object prototypes, 62–63
- built-in types, instantiating, 8–11

## C

- call() method, 26–27, 75
- [[Call]] property, 17
- capitalization, of constructor names, 50
- capitalize() method, for strings, 62
- charAt() method, 6
- classes, JavaScript lack of support for, 1
- closure functions, 81
- comparison functions, 20
- comparison without coercion, 5
- [[Configurable]] attribute, 39, 42
  - for sealed object, 46
- console.log function, 51
- constructor property, 50–51
  - changing by object literal notation, 59
- constructors, 6–7, 49–53
  - inheritance, 72–75
  - Object.defineProperty() method
    - inside, 52
  - private members for, 82–84
  - prototype use with, 57–60
  - purpose of, 51
  - scope-safe, 90–92

- constructors (*continued*)
    - stealing, 75–76
    - subtype, 72, 75–76
    - supertype, 72, 75–76
  - create() method, 70
  - creating
    - accessor properties, 42–43
    - objects, 6–7
    - properties, on temporary objects, 15
  - Crockford, Douglas, 69
- D**
- data
    - sharing private, 83–84
    - storing on prototype, 57
    - types. *See* primitive types; reference types; types
  - data properties, 37
    - attributes, 40–41
    - from mixins, 88–89
  - Date built-in type, 8
  - Date object, `valueOf()` method, 67
  - declarations, vs. expressions, 18–19
  - `defineProperties()` method, 43–44
  - `defineProperty()` method, 39–41, 52
  - [[Delete]] operation, for object property, 35
  - delete operator, 35, 48
  - dereferencing, objects, 7–8
  - detecting properties, 33–35
  - dot notation, for property access, 11
  - double equals operator (`==`), 5
  - double-square-bracket notation (`[[ ]]`), 17
- E**
- enumerable properties
    - adding to `Object.prototype`, 69
    - copying between supplier and receiver, 84
  - [[Enumerable]] property attribute, 39, 42
  - enumeration, 36–37
  - equals operators, double (`==`) and triple (`===`), 5
  - Error built-in type, 9
  - errors
    - from constructors in strict mode, 53
    - for primitive wrapper objects, 16
  - event support, adding to objects, 85–87
  - expressions, vs. declarations, 18–19
- [[Extensible]] attribute, 45–47
  - extensions for objects, preventing, 45
- F**
- falsy values, 33
  - first-class functions, 2
  - flexibility of JavaScript, 2
  - for-in loops, 36, 69, 84
  - frames of web pages, passing values between, 13
  - `freeze()` method, 47, 61
  - freezing objects, 47
  - frozen objects, prototype modification and, 61
  - Function constructor, 9, 10, 20
  - function keyword, 18
  - function literals, 10–11
  - functions, 2, 17–29
    - declarations vs. expressions, 18–19
    - hoisting, 18–19
    - overloading, 23–24
    - parameters, 21–22
    - as values, 19–21
- G**
- garbage-collection language, JavaScript as, 7
  - [[Get]] attribute, 41
  - `getOwnPropertyDescriptor()` method, 44
  - `getPrototypeOf()` method, 55
  - getter functions, 37–38
  - global object, this to represent, 25
- H**
- hash maps, JavaScript objects as, 48
  - `hasOwnProperty()` method, 34–35, 53, 66, 69
  - hoisting functions, 18–19
- I**
- if condition, 33
  - immediately invoked function expression (IIFE), 80
  - inheritance, 65–78
    - constructor, 72–75
    - methods from `Object.prototype`, 66–68
    - between objects, 69–72
    - prototype chaining, 65–69
    - pseudoclassical, 76, 87

- in operator, 53
  - testing for property instance with, 33–34
- instanceof operator, 12–13
  - temporary objects and, 15
- instances. *See also* objects
  - checking type of, 50–51
  - prototype link to constructor, 60
  - of reference types, 6
- instantiating
  - built-in types, 8–11
  - objects, 6
  - primitive wrappers, 16
- internal property, of functions, 17
- isArray() method, 13–14
- isExtensible() method, 45, 46
- isFrozen() method, 47
- isPrototypeOf() method, 55, 66
- isSealed() method, 46

## K

- keys() method, 36, 89–90
- key/value pairs, 48

## L

- length property, of functions, 21–22
- literals, 3, 9
  - array, 10
  - function, 10–11
  - object, 9–10
  - regular expression, 11

## M

- memory location, pointer to, 7
- methods, 6, 24–28
  - adding to arrays, 62
  - primitive, 6
  - privileged, 80
  - prototypes for defining, 57–60
  - for supertypes, accessing, 77
- mixins, 84–90
  - data properties from, 88–89
- module patterns, 80–82

## N

- names
  - for constructors,
    - capitalization of, 50
  - multiple functions with same, 23
  - for properties, 80

- new operator, 6, 90–92
  - constructors and, 49, 50, 52
  - instantiating reference types with, 9
  - this object created with, 51
- null value, 3
  - determining if a value is, 5
  - setting object variable to, 7–8
  - setting property to, 35
  - typeof operator and, 5
- Number primitive wrapper type, 14–15
- number type, 3

## O

- Object built-in type, 9
- Object constructor, 32
- Object.create() method, 70
- Object.defineProperties() method, 43–44
- Object.defineProperty() method,
  - 39–41, 52
- Object.freeze() method, 47, 61
- Object.getOwnPropertyDescriptor()
  - method, 44
- Object.getPrototypeOf() method, 55
- Object.isExtensible() method, 45, 46
- Object.isFrozen() method, 47
- Object.isSealed() method, 46
- Object.keys() method, 36, 89–90
- object literals, 9–10
- object patterns, 79–92
  - private and privileged members, 80–84
- Object.preventExtensions() method, 45
- Object.prototype.isPrototypeOf() method,
  - 55, 66
- Object.prototype prototype
  - methods inherited from, 66–68
  - modifying, 68–69
- objects, 2, 6, 31–48
  - creating, 6–7
  - dereferencing, 7–8
  - freezing, 47
  - inheritance, 69–72
  - methods, 24–28
  - modification, preventing, 45–47
  - properties, defining, 32–33
  - property inheritance from
    - prototype, 65–69
  - reference types as, 2
  - sealing, 45–46
- Object.seal() method, 45–46, 61
- overloading functions, 23–24

- own properties
  - determining existence of, 66
  - determining whether
    - enumerable, 66
  - in operator to check for, 34
  - for objects, 32
  - vs. prototype properties, 55–56
- P**
- parameters, 21–22
- person object, module pattern for
  - creating, 81
- pointer to memory location, 7
- preventExtensions() method, 45
- preventing object modifications, 45–47
- primitive methods, 6
- primitive types, 2, 3–6
- primitive wrapper types, 14–16
- private data, sharing, 83–84
- private members, 80–84
  - for constructors, 82–84
- privileged members, 80–84
- properties, 6, 11–12, 80
  - adding or removing, 8
  - copying enumerable, between
    - receiver and supplier, 84–86
  - creating on temporary objects, 15
  - defining, 32–33
  - defining multiple, 43–44
  - detecting, 33–35
  - enumerable, adding to
    - Object.prototype, 69
  - enumeration, 36–37
  - identifying on prototype, 54
  - removing, 35
  - string literals for names, 9
  - types, 37–38
- property attributes, 38–44
  - changing, 39–40
  - retrieving, 44
- propertyIsEnumerable() method, 37, 39, 66
- \_proto\_ property, 55
- prototype chaining, 65–69, 71, 74
  - object without, 72
  - overwriting, 73
- prototype properties
  - identifying, 54
  - vs. own properties, 55–56
- prototype property, of functions, 53, 72
- [[Prototype]] property, 54–56, 60–61
- prototypes, 53–63
  - built-in object, 62–63
  - changing, 60–62
  - identifying properties, 54
  - overwriting, 59
  - property inheritance from, 65–69
  - use with constructors, 57–60
- pseudoclassical inheritance, 76, 87
- pseudoinheritance, mixins for, 84
- [[Put]] method, 32–33
  - for data properties, 37
- R**
- read-only property, 38
- receiver, copying enumerable
  - properties between
    - supplier and, 84–86
- Rectangle constructor, 73–75
- reference types, 2, 6–8
  - identifying, 12–13
- reference values, storing on prototype, 57–58
- RegExp built-in type, 9
- RegExp constructor, 11
- regular expression literals, 11
- removing properties, 8, 35
- retrieving property attributes, 44
- revealing module pattern, 82
- S**
- scope-safe constructors, 90–92
- sealed objects, prototype modification
  - and, 61
- sealing objects, 45–46
- seal() method, 45–46, 61
- [[Set]] attribute, 32–33, 41
- setter functions, 37–38
- sharing private data, 83–84
- signatures, function with multiple, 23
- sort() method, 20
- square brackets ([ ])
  - for array literals, 10
  - for property access, 11–12
- Square constructor, 73–75
- stealing constructors, 75–76
- strict mode
  - for nonextensible objects, 45
  - for sealed objects, 46
- string literals, as property names, 9
- String primitive wrapper type, 14–15

- strings
  - capitalize() method, 62
  - conversion of values to,
    - for comparison, 21
  - methods, 6
- string type, 3
- substring() method, 6
- subtype constructors, 72, 75–76
- sum() function, 21
- supertype
  - constructors, 72, 75–76
  - methods, accessing, 77
- supplier, copying enumerable
  - properties between receiver and, 84–86

## T

- temporary objects, creating
  - properties on, 15
- this object, 25–26
  - changing value of, 26–28
  - to create length and width
    - properties, 76
  - creating with `new`, 51
- `toFixed()` method, 6
- `toLowerCase()` method, 6
- `toString()` method, 6, 35, 66, 67–68
- triple equals operator (`===`), 5
- truthy values, 33
- `typeof` operator, 4–5, 12
- types, 2. *See also* primitive types;
  - reference types
    - checking for different, 24
    - checking instance for, 50–51
    - instantiating built-in, 8–11

## U

- undefined type, 3
- underscore (`_`), in property name
  - prefix, 38, 80

## V

- `[[Value]]` attribute, 40
- `valueOf()` method, 66, 67
- values
  - functions as, 19–21
  - passing, between web page frames, 13
- variable object, 2
- variables, for primitive types, 3–4

## W

- web pages, passing values between
  - frames, 13
- wrapper types, primitive, 14–16
- `[[Writable]]` attribute, 40
- write-only properties, 38
