INTRODUCTION

xvii

Who This Book Is For	xvii
What's in the Book	xviii
This Book's Approach	xx
About the Code	xx
Corrections and Comments	xxi

PART I: INTERPRETERS

1

1

THE SMALLEST POSSIBLE PROGRAMMING LANGUAGE

3

What Is Brainfuck?	4
What Makes a Language Turing-Complete?	4
How Brainfuck Works	5
The Structure of an Interpreter	9
Implementing Brainfuck in Python	10
Getting the Source File	10
Writing the Interpreter	11
Running the Interpreter	14
Testing the Interpreter	15
Real-World Applications	17
Exercises	18
Notes	18

2

WRITING A BASIC INTERPRETER

21

Understanding NanoBASIC	22
BASIC History	22
NanoBASIC's Paradigm, Syntax, and Semantics	23
NanoBASIC Style and Minutiae	26
An Example NanoBASIC Program	27
Formalizing NanoBASIC's Syntax	28
The NanoBASIC Implementation	32
The Tokenizer	33
Nodes	36
Errors	40
The Parser	41
The Runtime	49
Running a Program	53
Testing NanoBASIC	53

Real-World Applications	57
Exercises.	58
Notes	58

PART II: COMPUTATIONAL ART 61

3 63 RETRO IMAGE PROCESSING

What Is Dithering?	64
Getting Started	65
The Dithering Algorithm	67
The MacPaint File Format	72
Translating Bytes to Bits	73
Implementing Run-Length Encoding	74
Testing Run-Length Encoding	78
Converting to MacBinary	80
Putting It All Together	82
The Results	83
Real-World Applications	86
Exercises.	87
Notes	87

4 89 A STOCHASTIC PAINTING ALGORITHM

How It Works	90
Command Line Options	95
The SVG Format	97
The Algorithm	98
The Main Implementation	99
Setup.	99
Utility Methods	102
Trials	103
Output.	106
The Results	107
Real-World Applications	111
Exercises.	112
Notes	112

PART III: EMULATORS 113

5 115 BUILDING A CHIP-8 VIRTUAL MACHINE

Virtual Machines	116
The CHIP-8 Virtual Machine.	117
Registers and Memory	117
Instructions	119

The Implementation	122
The Run Loop	123
Command Line Arguments	125
VM Setup and Helper Functions	126
Graphics	128
Instruction Execution	131
Testing the VM	136
Playing Games	137
Real-World Applications	139
Exercises	140
Notes	140

6

EMULATING THE NES GAME CONSOLE

141

About the NES	142
The Hardware	143
The Software	144
Building the Emulator	145
Planning the Structure	145
Creating the Main Loop	145
Emulating the Cartridge	148
Emulating the CPU	152
Understanding the PPU	176
Implementing the PPU	185
Testing the Emulator	194
Playing Games	198
Real-World Applications	201
Exercises	201
Notes	202

PART IV: SUPER-SIMPLE MACHINE LEARNING

203

7

CLASSIFICATION WITH K-NEAREST NEIGHBORS

205

The Rise of Machine Learning	206
How KNN Works	207
Implementing Classification with KNN	209
Classifying Fish	212
Classifying Handwritten Digits	215
Real-World Applications	218
Exercises	219
Notes	219

8	
REGRESSION WITH K-NEAREST NEIGHBORS	221
How KNN Regression Works	222
Implementing Regression with KNN	223
Predicting Fish Weights	224
Predicting the Rest of a Handwritten Digit.	224
Real-World Applications	229
Exercises.	229
Notes	229
 AFTERWORD	 231
What We Did and What's Next.	231
On Learning Computer Science	232
Interpreters	234
Computational Art	234
Emulators	234
Machine Learning	235
 APPENDIX: BITWISE OPERATIONS	 237
A Review of Binary	237
Common Bitwise Operations	239
Left Shift (<<)	239
Right Shift (>>)	240
OR ()	240
AND (&)	242
XOR (^)	243
Complement (~)	244
 INDEX	 245
