Errata for *Effective C* (updated to 3\textsuperscript{rd} printing)

**Page 20:** “unit of a data handled” should now read “unit of data handled”

**Page 29:** In the paragraph below Listing 2-10:
“At (1), we assign the pointer to \texttt{sigline\_p} to the address of the \texttt{sigline} object.”
should now read:
“At (1), we assign the address of the \texttt{sigline} object to the \texttt{sigline\_p} pointer.”

**Page 42:** In Table 3-4, on the second row under the “Weighting” column, 20 should now read 20.

**Page 79:** In the second line of the code in the middle of the page, we added an ampersand (&) after the equals sign (=) so it should now read:
```c
int arr[100];
int *arrp1 = &arr[40];
int *arrp2 = arrp1 + 20; // arrp2 points to arr[60]
printf("%td\n", arrp2-arrp1); // prints 20
```

**Page 97:** We removed Exercise 2 because Listing 5-13 already does what the exercise asks.

And the last sentence, “In the next chapter, you’ll learn about characters and strings.”
should now read:
“In the next chapter, you’ll learn about dynamically allocated memory.”

**Page 135:** In the first paragraph, the line:
“These function names are similar to the narrow string function names, except that \texttt{str} is replaced with \texttt{wc} . . .”
should now read:
“These function names are similar to the narrow string function names, except that \texttt{str} is replaced with \texttt{wcs} . . .”
Page 165: The section title “Reading to and Writing from Binary Streams” should now read “Reading from and Writing to Binary Streams”
