

CONTENTS IN DETAIL

FOREWORD	xvii
-----------------	-------------

ACKNOWLEDGMENTS	xix
------------------------	------------

INTRODUCTION	xxi
---------------------	------------

Who Is This Book For?	xxii
What I Expect You to Know Already	xxii
What Can You Expect to Learn?	xxii
How to Use This Book	xxv

1	
COMPUTERS AND NUMBERS	1

Numbers and Number Bases	2
Binary, Octal, and Hexadecimal Numbers	3
Conversions Between Number Bases	5
How Computers Represent Numbers	8
Integers	8
Floating-Point Numbers	12
What You Need to Know About Floating-Point Arithmetic	14
Round-Off Error	15
Unrepresentable Numbers	16
Summary	17

2	
SETS AND ABSTRACT ALGEBRA	19

Concerning Sets	20
Special Sets	21
Set Operations	22
Set Operations in Python	24
Venn Diagrams	24
Subsets and Supersets	26
Power Sets	28
The Laws of Set Theory	28
Experimenting with Number Sets in Python	29
Abstract Algebra and Groups	31
Examples of Groups, Magmas, and Monoids	32
Special Groups	32

Cantor: To Infinity and Beyond	34
The Cardinality of Infinite Sets	34
The Continuum Hypothesis and Infinities Without End	38
Computable and Uncomputable Numbers	39
Uncomputable Python	40
Summary	42

3

BOOLEAN ALGEBRA

43

Definition and Laws	44
Boolean Algebra Leads to Digital Logic	45
Set Theory as a Boolean Algebra	45
Propositional Logic as a Boolean Algebra	46
The Set $\{0, 1\}$ as a Boolean Algebra	48
The Truth Tables of Digital Logic	49
Boolean Functions	51
Duals and Complements	52
Boolean Functions in Code	54
Canonical Normal Forms	55
Sum of Products	56
Product of Sums	56
Karnaugh Maps	57
Algebraic Simplification of Boolean Expressions	61
Digital Circuits	64
Boolean Functions as Digital Circuits	65
All You Need Is NAND (or NOR)	66
A Binary Adder	67
Logic Gate Construction	69
Summary	71

4

FUNCTIONS AND RELATIONS

73

Functions	73
Visualization of Functions	75
Onto, One-to-One, and Inverse Functions	75
Composition of Functions	77
Binary Relations	78
Cartesian Products	78
Definition	79
Relations as Matrices	80
Counting Relations	81
Relations on Infinite Sets	82
Composition	82
Converse and Complement	85
Binary Relations as Graphs	85

n-ary Relations	86
Binary Relations in Code	87
Equivalence Relations and Classes	89
Equivalence Classes	90
Number Sets	91
Partial Orderings	92
Summary	93

5 INDUCTION 95

Weak Induction	96
Strong Induction	103
The Chicken Nuggets Problem	104
The Fundamental Theorem of Arithmetic	105
Cautionary Tales	105
Forgetting the Base Case	106
Reversing the Implication	106
Showing the Inductive Hypothesis Holds for All m	108
Proving with Loop Invariants	109
Integer Square Root	109
Bubble Sort	111
Binary Search	112
Gnome Sort	114
Summary	116

6 RECURRENCE AND RECURSION 117

Recurrence Relations	118
Linear Recurrence Relations	119
The Collatz Sequence	122
Nonlinear Recurrence Relations	125
Logistic Map	125
Mandelbrot Set	127
Solving Recurrence Relations	129
First-Order Relations	129
Second-Order Relations	134
Recursion	139
Powers	140
Factorials	142
Fibonacci Sequence	143
Quicksort	146
Towers of Hanoi	147
Summary	150

7

NUMBER THEORY

151

Primes	152
Proving Euclid's Theorem	152
Locating Primes	153
Identifying Prime Subsets	155
Exploring Quirky Primes	156
Running the Primality Test	157
Investigating the Goldbach Conjecture	159
Divisibility	159
Divisibility Properties	160
The Least Common Multiple and the Greatest Common Divisor	160
Modular Arithmetic	164
Congruences	166
Modular Equations	169
Diophantine Equations	174
Linear	174
Nonlinear	176
Integer Sequences	177
Euler's Totient Function	177
Aliquot Sum and Sequence	178
Harshad Numbers	180
Narayana's Cows	182
Deranged Subfactorials	183
Smith and Ruth–Aaron Numbers	183
Sequence Audio	184
Summary	185

8

COUNTING AND COMBINATORICS

187

The Principles of Counting	188
An Example: Hats in the Park	189
Women Without Hats	189
Men with (and Without) Hats	191
Loose Ends	191
Sum and Product Rules	192
Inclusion-Exclusion	193
The Pigeonhole Principle	196
Permutations and Combinations	199
Permutations	199
Combinations	203
The Binomial Theorem	207
Summary	209

9		
GRAPHS		211
Basic Graph Concepts	212	
Complete Graphs	214	
Graph Isomorphisms	214	
Representing Graphs in Code	216	
Adjacency Lists	216	
Adjacency Matrices	217	
Breadth-First and Depth-First Traversal and Searching	219	
Breadth-First Traversal	219	
Depth-First Traversal	222	
Traversals as Searches	225	
The Shortest Path Between Nodes	228	
Unweighted Shortest Path	228	
Dijkstra's Algorithm for Weighted Graphs	230	
Directed Acyclic Graphs and Topological Sort	233	
Working Through an Example	234	
Coding Topological Sort	235	
Summary	237	

10		
TREES		239
Defining Trees	240	
Spanning Trees	241	
Locating Spanning Trees	241	
Finding Minimum Spanning Trees	244	
Rooted and Ordered Trees	246	
Binary Trees	247	
Binary Tree Traversals and Searches	249	
Using Breadth-First Tree Traversal	249	
Using Depth-First Tree Traversal	250	
Searching a Tree	253	
Binary Trees in Code	254	
Creating Traversals in Code	255	
Using the Code	257	
The Animals Game	261	
Summary	264	

11		
PROBABILITY		267
Events and Random Variables	268	
The Rules of Probability	269	
Probability of an Event	270	
Sum Rule	271	

Product Rule	272
Sum Rule Update	274
Conditional Probability	275
Total Probability	277
Joint and Marginal Probabilities	279
Joint Probability Tables	280
Chain Rule for Probability	283
Probability Distributions	285
Histograms	286
Discrete Distributions	288
Continuous Distributions	294
The Central Limit Theorem and the Law of Large Numbers	299
Bayes' Theorem	303
Summary	305

12 STATISTICS 307

Types of Data	308
Nominal	308
Ordinal	308
Interval	309
Ratio	309
Summary Statistics	310
Means, Median, and Mode	310
Measures of Variation	316
Quantiles and Box Plots	320
Quantiles and Percentiles	320
Box Plots	322
Robustness and Sensitivity to Outliers	323
Correlation	324
Pearson Correlation	324
Spearman Correlation	327
A Cautionary Tale: Anscombe's Quartet	329
Hypothesis Testing	330
A Gedankenexperiment	331
Independent Samples	331
Paired Samples	336
Confidence Intervals	338
Confidence Intervals and Hypothesis Tests	338
Confidence Intervals and Sample Size	340
Summary	342

13		
LINEAR ALGEBRA		345
Vectors and Vector Spaces	346	346
Definitions	346	346
Vectors as Geometric Objects	347	347
Vectors in \mathbb{R}^n	349	349
Row and Column Vectors	350	350
Vector Operations	351	351
Treasure Island Redux	355	355
Vector Space Concepts	356	356
Subspaces, Linear Combinations, and Spanning Sets	357	357
Linear Independence and Basis Sets	357	357
Matrices	359	359
Exploring Matrix Examples	362	362
Forming Vector Spaces	364	364
Solving Systems of Linear Equations	364	364
Gauss–Jordan Elimination	365	365
Linear Vector Equations	366	366
Square Matrices	369	369
Properties of Square Matrices	369	369
Matrix Rank	370	370
Determinants	372	372
Linear Transformations	374	374
Affine Transformations	376	376
Iterated Function Systems	377	377
Eigenvalues and Eigenvectors	378	378
Finding Eigenvalues	379	379
Finding Eigenvectors	380	380
Summary	381	381

14		
DIFFERENTIAL CALCULUS		383
Derivatives	384	384
Basic Rules	387	387
Rules for Trigonometric Functions	390	390
The Chain Rule	391	391
Rules for Exponentials and Logarithms	392	392
Minima and Maxima of Functions	395	395
Using the Second Derivative Test	397	397
Locating Stationary Points with Newton’s Method	397	397
Partial Derivatives	399	399
Mixed Partial Derivatives	400	400
The Chain Rule for Partial Derivatives	401	401

Derivatives in Code	402
Numeric Differentiation	403
Automatic Differentiation	405
Symbolic Differentiation	408
Optimization with Gradient Descent	409
Summary	413

15
INTEGRAL CALCULUS **415**

Curves and Areas	416
Indefinite Integrals	418
A Few Indefinite Integrals	419
Antiderivatives	420
A Fistful of Integration Tricks	421
Definite Integrals	424
The Throwing Darts Metaphor	425
Monte Carlo Integration	427
Trapezoidal Rule	428
Simpson’s Rule	429
Definite Integrals with SymPy	430
Adaptive Numerical Integration	431
Summary	433

16
DIFFERENTIAL EQUATIONS **435**

Ordinary Differential Equations	436
First-Order	436
Second-Order	438
Solving ODEs Numerically	439
Euler’s Method	440
Runge–Kutta Method	441
Worked Examples	444
Simple Pendulum	444
Projectile Motion with Drag	452
SIR Epidemic Model	456
Lorenz Attractor	462
Summary	466
Final Words	466

INDEX **467**
