# INDEX

## A

A (adenine), 206  
ABO blood group system, 126  
acetyl-CoA, 72, 85, 115–117, 120–122  
activation energy, 176  
acyl-carnitine, 121  
acyl-CoA, 120–121  
adenine (A), 206  
adenosine diphosphate (ADP), 82  
adenosine monophosphate (AMP), 207  
adenosine triphosphate (ATP), 22–23, 82, 106  
affinity chromatography, 233  
affinity of enzymes, 181  
alcohol, 20, 153  
aldoses, 83  
allosteric enzymes, 196–199  
 $\alpha$ -amylase, 143, 144, 162, 163  
 $\alpha$ -amylase activity measurement method, 237  
amino acids  
    in carbon cycle, 45  
    overview, 154–157  
    primary structure of, 158  
    protein synthesis and, 27–28  
    quaternary structure of, 161  
    secondary structure of, 159  
    tertiary structure of, 160  
AMP (adenosine monophosphate), 207  
amphipathicity, 93  
amylopectin structure, 137–139  
amylose structure, 137–139  
angina pectoris, 104  
anticodon, 224  
anti-nutritional factors, 193  
antisense strand, 222  
arteriosclerosis, 103–104

atoms, 53  
ATP (adenosine triphosphate), 22–23, 82, 106  
autolysis, 216

## B

bad cholesterol, 100, 105  
basal metabolism, 107  
base catalysis, 216  
base complementarity, 209–211  
base sequence, 219  
 $\beta$ -oxidation, 119–120  
 $\beta$  type, 143  
binary fission, 231  
biochemistry, definition of, 6, 8  
biochemists, 228–229  
biogeochemical cycle, 40–44  
biological catalyst, 175  
biopolymers, 36–37, 228  
blood  
    ABO group system, 126  
    glucosyltransferase, 169–171  
    types of, 124–129, 169, 170  
blood sugar, 60, 63, 108  
breathing, 64–65

## C

C (carbon). *See* carbon (C)  
C (cytosine), 206, 208  
carbohydrates  
    monosaccharides and cyclic structure, 63  
    overview, 60–62  
    plants and, 48  
    saccharides and -ose suffix, 63  
carbon (C)  
    biogeochemical cycle and, 43  
    cycle of, 45–47  
    fixation of, 57  
    fundamentals of, 36

carbon bonds, 36  
carbon dioxide  
    in carbon cycle, 46  
    fixation of, 51, 57–59  
    in photosynthesis, 32  
carboxyl group, 95  
catalysts, 175  
cells  
    chemical reactions in, 26–35  
    interior of, 18–25  
    membrane of, 16  
    origin of, 231  
    structure of, 14–17  
cellular respiration, 37, 65  
cellulose, 132, 142  
centrifugation, 235  
cerebral hemorrhage, 104  
cerebral infarction, 104  
chemical bonds, 140–144  
    covalent, 36  
    double, 96  
    glycosidic, 138, 141–143, 173  
    ionic, 36  
    metallic, 36  
    peptide, 155, 158  
    phosphodiester, 214  
chitin, 132  
chlorophyll, 49–55  
chloroplasts  
    overview, 17  
    photosynthesis and, 32  
    structure of, 49  
cholesterol  
    lipoproteins  
        arteriosclerosis, 103–104  
        good and bad cholesterol, 105  
        overview, 102  
    purpose of, 98–99  
    as steroid, 97

- cholesterol ester, 101
- chromatography of columns, 232-233
- citric acid cycle (TCA cycle), 67, 71-73, 115
- CoA (coenzyme A), 85
  - acetyl-CoA, 72, 85, 115-117, 120-122
  - acyl-CoA, 120-121
  - malonyl-CoA, 116-117
  - succinyl-CoA, 72
- column chromatography, 232-233
- competitive inhibition, 193
- complementarity
  - configurations, 211
- concentration gradient force, 77
- consumers, 48
- covalent bonds, 36
- cycles
  - biogeochemical, 40-44
  - carbon, 45-47
  - citric acid, 71-73
- cyclic structure, 61, 63, 141
- cytidine monophosphate, 208
- cytoplasm, 16
- cytosine (C), 206, 208
- cytosol, 16, 30
  
- D**
- deoxyadenosine
  - monophosphate, 207
- deoxycytidine
  - monophosphate, 208
- deoxyguanosine
  - monophosphate, 208
- deoxyribonucleic acid (DNA), 17, 202-203, 218-219
- deoxyribose, 207
- deoxythymidine
  - monophosphate, 208
- deoxyuridine monophosphate, 208
- detoxification, 21
- D-form isomers, 84
- diacylglycerol, 92
- dietary fiber, 142
- digestion, 7
  
- DNA (deoxyribonucleic acid), 17, 202-203, 218-219
- DNA polymerase I, 212
- DNA polymerase activity measurement method, 236
- double bonds, 96
  
- E**
- EC Number (Enzyme Commission Number), 166
- ecosystems
  - biogeochemical cycle, 40-44
  - carbon cycle, 45-47
- electron transport chain, 52-55, 67, 74-78
- electrophoresis, 233-234
- endoplasmic reticulum, 16, 17
- endothelial cells, 113
- energy
  - ATP, 82
  - creation of
    - citric acid cycle, 71-73
    - electron transport chain, 74-78
    - glucose decomposition by glycolysis, 68-70
    - overview, 66-67
  - fat used as, 118-122
  - ingested and expended, 106-110
  - metabolism, 38
- Enzyme Commission Number (EC Number), 166
- enzymes
  - classifications of, 166-167
  - DNA polymerase, 212-214
  - fundamentals of, 37
  - hydrolases, 172-173
  - inhibitors and
    - allosteric enzymes, 196-199
    - overview, 193-195
  - lipoprotein lipase, 112
  - proteins and
    - amino acids, 154-161
    - overview, 150-151, 153-154
    - roles of, 151-152
- reaction measurement of
  - $\alpha$ -amylase activity method, 237
  - DNA polymerase activity method, 236
  - overview, 236
- substrates and, 162-165
- transferases
  - determining blood type, 169-171
  - overview, 168
- using graphs to understand
  - activation energy, 176
  - calculating  $V_{\max}$  and  $K_m$ , 182-192
  - chemical reactions, 175, 177
  - maximum reaction rate, 178
  - Michaelis-Menten equation and Michaelis constant, 180-181
  - overview, 174
- essential fatty acids, 95
- ether extraction, 204
- eukaryotes, 227
- exons, 219, 227
- expended energy, 106-110
- experiments
  - centrifugation, 235
  - column chromatography, 232-233
  - electrophoresis and western blots, 233-234
  - enzyme reaction measurement
    - $\alpha$ -amylase activity measurement method, 237
    - DNA polymerase activity measurement method, 236
    - overview, 236
  - lectin blotting, 234-235
  - overview, 232
- external respiration, 37, 65

## F

### fat

- ingested and expended energy, 106–110
- overview, 106
- saccharides
  - fat used as energy source, 118–122
  - overeating and weight gain, 123
  - overview, 111–117
- fatty acids, 45, 95–96
- foam cells, 103
- free cholesterol, 101
- fructofuranose, 83
- fructopyranose, 83
- fructose, 59, 61, 116
- fruit
  - becoming sweet, 133–135
  - saccharides, 131–132
  - sugar in, 130
- furanose, 83

## G

- G (guanine), 206, 208
- galactose, 62
- genes
  - DNA, 17, 202–203, 218–219
  - exons, 219, 227
  - introns, 219, 223, 227
  - overview, 19
  - RNA. *See* RNA (ribonucleic acid)
- genetic material of cells, 202
- global environment, 40–41
- globin, 161
- glucofuranose, 83
- gluconeogenesis, 29–30
- glucose
  - in carbon cycle, 45
  - composition of, 62
  - cyclic (ring) form, 61
  - decomposition by glycolysis, 68–70
  - in energy production, 30
  - in food, 59
  - open-chain form, 61

- glucosyltransferase, 169–171
- glycocalyx, 125
- glycogen, 132
- glycolipids, 94
- glycolysis
  - in energy production, 30
  - glucose decomposition by, 68–70
  - in respiration, 67
- glycosidic bond, 138, 141–143, 173
- glucosyltransferase, 169
- golgi apparatus, 16, 17
- good cholesterol, 100, 105
- granams, 49
- graphs
  - activation energy, 176
  - chemical reactions, 175, 177
  - maximum reaction rate, 178
  - Michaelis-Menten equation, 180–181, 191–192
  - overview, 174
  - reciprocals, 186–190
- guanine (G), 206, 208
- guanosine monophosphate, 208

## H

- HDL (high-density lipoproteins), 101–105
- heme, 160
- hemiacetal, 63
- hemoglobin, 161
- high-density lipoproteins (HDL), 101–105
- hydrocarbon chain, 95
- hydrogen acceptor, 54
- hydrolases, 119, 172–173
- hydrolysis, 173
- hydrophilic, 16, 93
- hydrophobic, 16, 93

## I

- ingested energy, 106–110
- ingested lipids, 112
- inhibition
  - competitive, 193
  - non-competitive, 194

### inhibitors

- allosteric enzymes, 196–199
- overview, 193–195
- insulin, 108
- internal respiration, 37, 65
- introns, 219, 223, 227
- invertase, 133, 134
- ionic bonds, 36

## K

- ketoses, 83
- Krebs cycle (citric acid cycle), 67, 71–73, 115

## L

- lactose, 61
- LDL (low-density lipoproteins), 101–105
- lectin blotting, 234–235
- leptin, 109, 110
- L-form isomers, 84
- Lineweaver-Burk reciprocal plot, 183–184, 192
- lipids
  - cholesterol, 97–99
  - fatty acids, 95–96
  - lipoproteins
    - arteriosclerosis, 103–104
    - good and bad
      - cholesterol, 105
      - overview, 100–102
    - overview, 88–90
    - types of, 91–94
  - lipogenesis, 29
  - lipoprotein lipase enzyme, 112
  - lipoproteins
    - arteriosclerosis, 103–104
    - good (HDL) and bad (LDL)
      - cholesterol, 105
      - overview, 100–102
  - liquid scintillation counter, 236
  - low-density lipoproteins (LDL), 101–105
  - lysosome, 16–17

- M**
- macrophages, 103
  - malonyl-CoA, 116–117
  - maximum reaction rate, 178–179
  - messenger RNA (mRNA), 222–223
  - metabolism, 38, 107, 231
  - metabolism first theory, 231
  - metallic bonds, 36
  - methane, 46
  - Michaelis constant, 180–181
  - Michaelis-Menten equation, 180–181, 191–192, 196
  - Miescher, Friedrich, 204
  - milk sugar, 63
  - mitochondria, 16–17, 31, 116
  - molecular biology
    - and biochemistry, 228–230
    - origin of cells, 231
    - recombinant DNA techniques, 229–230
  - monoacylglycerol, 92
  - monosaccharides
    - aldoses and ketoses, 83
    - D-form and L-form, 84
    - pyranose and furanose, 83
    - in respiration, 62–63
    - structure of, 131–132
  - mRNA (messenger RNA), 222–223
  - multicellular organisms, 15
  - myocardial infarction, 104
- N**
- NADH molecule, 54–55, 75
  - NADPH molecule, 54–55
  - neutral fat, 91
  - neutral lipids, 91
  - non-competitive inhibition, 194–195
  - nucleic acids. *See also* nucleotides
    - conducting experiments
      - centrifugation, 235
      - column chromatography, 232–233
      - electrophoresis and western blots, 233–234
    - enzyme reaction
      - measurement, 236–237
      - lectin blotting, 234–235
      - overview, 232
    - genes
      - DNA, 218–219
      - RNA, 220–227
    - molecular biology
      - and biochemistry, 228–230
      - origin of cells, 231
      - recombinant DNA techniques, 229–230
    - nuclein, 204
    - overview, 199–203
  - nuclein, 204
  - nucleosides, 205
  - nucleotides
    - base complementarity
      - and DNA structure, 209–211
    - DNA replication and enzyme
      - DNA polymerase, 212–214
    - overview, 205–208
    - RNA structure, 214–217
  - nucleus, 16, 17, 204
- O**
- obesity
    - ingested and expended energy, 106–110
    - overview, 106
    - saccharides
      - fat used as energy source, 118–122
      - overeating and weight gain, 123
      - overview, 111–117
  - oligosaccharides, 131–132, 137
  - open-chain glucose form, 61
  - organelles, 16
  - ose suffix, 63
  - overeating, 123
  - oxidation-reduction, 37
  - oxidized, defined, 37
  - oxygen, 77, 216
- P**
- palmitic acid, 116
  - pepsin, 162
  - peptide bonds, 155, 158
  - peptidyl transfer, 158
  - phagocyte, 103
  - phosphate, 205
  - phosphodiester bond, 214
  - phospholipids, 16, 93, 95
  - phosphopantetheine group, 85
  - phosphorylation, 56
  - photophosphorylation reaction, 50–56
  - photosynthesis
    - carbon dioxide fixation, 57–59
    - chloroplast structure, 49
    - overview, 79–81
    - photophosphorylation reaction, 50–56
    - plants, 48
  - photosystem I, 55
  - photosystem II, 55
  - Phytolacca americana* plant, 228
  - pokeweed, 228
  - polynucleotides, 209–210
  - polypeptide chain, 158
  - polysaccharides, 131–132, 137
  - post-genome era, 230
  - precursor mRNA, 223
  - primary structure, 158
  - producers, 48
  - product, defined, 37
  - progesterone, 98
  - protease, 204
  - protein catabolism enzymes, 164, 165
  - proteins
    - amino acids
      - overview, 154–157
      - primary structure of, 158
      - quaternary structure of, 161
      - secondary structure of, 159
      - tertiary structure of, 160
    - created by cells, 18
    - overview, 150–151, 153–154
    - roles of, 151–152

proteios, 154  
pyranose, 83  
pyrimidine bases, 206  
pyruvate, 68, 72  
pyruvic acid, 29–30

## Q

quaternary structure, 161

## R

rate-limiting reaction, 117  
reaction rate, 178  
reciprocals, 186–190  
recombinant DNA techniques,  
229–230  
reduced, defined, 37  
reducing agents, 37  
replication first theory, 231  
replication of DNA, 211, 212–214  
reproduction, 231  
respiration  
breathing, 64–65  
carbohydrates  
monosaccharides and cyclic  
structure, 63  
overview, 60–62  
saccharides and -ose  
suffix, 63  
energy creation by  
citric acid cycle, 71–73  
electron transport chain,  
74–78  
glucose decomposition by  
glycolysis, 68–70  
overview, 66–67  
fundamentals of, 37  
overview, 79–81  
ribonucleic acid (RNA). See RNA  
(ribonucleic acid)  
ribosomal RNA (rRNA), 223–225  
ribosomes  
in cells, 16–19  
defined, 37  
in protein synthesis, 27–28  
ribozymes, 226–227  
rice starch, 136–137  
ring structure of glucose, 61, 141

RNA (ribonucleic acid)  
in creation of proteins, 203  
mRNA, 222–223  
overview, 220–221  
ribozymes, 226–227  
rRNA and tRNA, 223–225  
self-splicing, 227  
structure of, 214–217  
rRNA (ribosomal RNA), 223–225

## S

saccharides  
aldoses and ketoses, 83  
in carbon fixation, 58  
D-form and L-form  
isomers, 84  
excess, transformation into fat,  
111–117  
in fruits, 133–135  
-ose suffix and, 63  
overeating and weight  
gain, 123  
photosynthesis and, 25  
pyranose and furanose, 83  
types of, 131–132  
using fat as energy source,  
118–122  
secondary structure, 159  
self-replication, 231  
sense strand, 222  
side chain, 159  
sigmoid curve, 196  
specific gravity, 101  
spliceosome, 227  
splicing, 223  
starch, 66, 132, 136  
steroids, 97  
steroid hormone, 98  
steroidal skeleton, 97  
stroma, 57  
substance metabolism, 38  
substrates, 37, 162–165  
subunit, 161  
succinyl-CoA, 72  
sucrose, 59, 61–63  
sucrose-phosphate synthase,  
133–134

sugar, 60–61, 116, 130  
sugar chain, 126

## T

T (thymine), 206, 208  
TCA cycle (citric acid cycle), 67,  
71–73, 115  
templates, DNA replication, 211  
tertiary structure, 160  
testosterone, 98  
thylakoid membrane, 52  
thylakoids, 49  
thymine (T), 206, 208  
thymus, 228  
transcription, 222  
transferases  
glucosyltransferase and blood  
type, 169–171  
overview, 168  
transfer RNA (tRNA), 223–225  
triacylglycerol, 92, 113–114  
tRNA (transfer RNA), 223–225

## U

U (uracil), 206, 208  
unicellular microorganisms, 15  
unsaturated carbons, 96  
unsaturated fatty acids, 96  
uracil (U), 206, 208  
uridine monophosphate, 208

## V

very low-density lipoproteins  
(VLDL), 113  
vitalism theory, 229  
Vitamin D, 99

## W

weight gain, 123  
western blots, 233–234  
wine, 21
