

CONTENTS IN DETAIL

PREFACE

xix

Who Should Read This Book?	xx
Prerequisites	xx
How to Read This Book.	xx
A Hands-On Approach	xx
How This Book Is Organized.	xxi
What's New in the Second Edition?	xxi
A Note on Terminology	xxii

ACKNOWLEDGMENTS

xxiii

1

THE BIG PICTURE

1

1.1 Levels and Layers of Abstraction in a Linux System	2
1.2 Hardware: Understanding Main Memory	4
1.3 The Kernel	4
1.3.1 Process Management	5
1.3.2 Memory Management	6
1.3.3 Device Drivers and Management.	7
1.3.4 System Calls and Support.	7
1.4 User Space	8
1.5 Users	9
1.6 Looking Forward	10

2

BASIC COMMANDS AND DIRECTORY HIERARCHY

11

2.1 The Bourne Shell: /bin/sh.	12
2.2 Using the Shell	12
2.2.1 The Shell Window	12
2.2.2 cat	13
2.2.3 Standard Input and Standard Output	13
2.3 Basic Commands	14
2.3.1 ls	14
2.3.2 cp	15
2.3.3 mv	15
2.3.4 touch	15
2.3.5 rm	16
2.3.6 echo	16
2.4 Navigating Directories	16
2.4.1 cd	16
2.4.2 mkdir	17
2.4.3 rmdir	17
2.4.4 Shell Globbing (Wildcards)	17

2.5	Intermediate Commands	18
2.5.1	grep	18
2.5.2	less	19
2.5.3	pwd	19
2.5.4	diff	20
2.5.5	file	20
2.5.6	find and locate	20
2.5.7	head and tail	21
2.5.8	sort	21
2.6	Changing Your Password and Shell	21
2.7	Dot Files	21
2.8	Environment and Shell Variables	21
2.9	The Command Path	22
2.10	Special Characters	23
2.11	Command-Line Editing	24
2.12	Text Editors	24
2.13	Getting Online Help	25
2.14	Shell Input and Output	27
2.14.1	Standard Error	27
2.14.2	Standard Input Redirection	28
2.15	Understanding Error Messages	28
2.15.1	Anatomy of a UNIX Error Message	28
2.15.2	Common Errors	29
2.16	Listing and Manipulating Processes	30
2.16.1	Command Options	31
2.16.2	Killing Processes	31
2.16.3	Job Control	32
2.16.4	Background Processes	32
2.17	File Modes and Permissions	33
2.17.1	Modifying Permissions	34
2.17.2	Symbolic Links	35
2.17.3	Creating Symbolic Links	36
2.18	Archiving and Compressing Files	37
2.18.1	gzip	37
2.18.2	tar	37
2.18.3	Compressed Archives (.tar.gz)	38
2.18.4	zcat	39
2.18.5	Other Compression Utilities	39
2.19	Linux Directory Hierarchy Essentials	40
2.19.1	Other Root Subdirectories	41
2.19.2	The /usr Directory	41
2.19.3	Kernel Location	42
2.20	Running Commands as the Superuser	42
2.20.1	sudo	42
2.20.2	/etc/sudoers	43
2.21	Looking Forward	43

3

DEVICES

45

3.1	Device Files	46
3.2	The sysfs Device Path	47

3.3	dd and Devices	48
3.4	Device Name Summary	49
3.4.1	Hard Disks: /dev/sd*	50
3.4.2	CD and DVD Drives: /dev/sr*	51
3.4.3	PATA Hard Disks: /dev/hd*	51
3.4.4	Terminals: /dev/tty*, /dev/pts/*, and /dev/tty	51
3.4.5	Serial Ports: /dev/ttyS*	52
3.4.6	Parallel Ports: /dev/lp0 and /dev/lp1	52
3.4.7	Audio Devices: /dev/snd/*, /dev/dsp, /dev/audio, and More	53
3.4.8	Creating Device Files	53
3.5	udev	54
3.5.1	devtmpfs	54
3.5.2	udev Operation and Configuration	55
3.5.3	udevadm	57
3.5.4	Monitoring Devices	57
3.6	In-Depth: SCSI and the Linux Kernel	58
3.6.1	USB Storage and SCSI	61
3.6.2	SCSI and ATA	62
3.6.3	Generic SCSI Devices	63
3.6.4	Multiple Access Methods for a Single Device	63

4

DISKS AND FILESYSTEMS

65

4.1	Partitioning Disk Devices	67
4.1.1	Viewing a Partition Table	68
4.1.2	Changing Partition Tables	69
4.1.3	Disk and Partition Geometry	70
4.1.4	Solid-State Disks (SSDs)	72
4.2	Filesystems	72
4.2.1	Filesystem Types	73
4.2.2	Creating a Filesystem	74
4.2.3	Mounting a Filesystem	75
4.2.4	Filesystem UUID	76
4.2.5	Disk Buffering, Caching, and Filesystems	77
4.2.6	Filesystem Mount Options	77
4.2.7	Remounting a Filesystem	79
4.2.8	The /etc/fstab Filesystem Table	79
4.2.9	Alternatives to /etc/fstab	80
4.2.10	Filesystem Capacity	81
4.2.11	Checking and Repairing Filesystems	82
4.2.12	Special-Purpose Filesystems	84
4.3	Swap Space	85
4.3.1	Using a Disk Partition as Swap Space	85
4.3.2	Using a File as Swap Space	85
4.3.3	How Much Swap Do You Need?	86
4.4	Looking Forward: Disks and User Space	86
4.5	Inside a Traditional Filesystem	87
4.5.1	Viewing Inode Details	89
4.5.2	Working with Filesystems in User Space	90
4.5.3	The Evolution of Filesystems	91

5 HOW THE LINUX KERNEL BOOTS 93

5.1	Startup Messages	94
5.2	Kernel Initialization and Boot Options	95
5.3	Kernel Parameters	96
5.4	Boot Loaders	97
5.4.1	Boot Loader Tasks	97
5.4.2	Boot Loader Overview	98
5.5	GRUB Introduction	98
5.5.1	Exploring Devices and Partitions with the GRUB Command Line	100
5.5.2	GRUB Configuration	102
5.5.3	GRUB Installation	104
5.6	UEFI Secure Boot Problems	106
5.7	Chainloading Other Operating Systems	106
5.8	Boot Loader Details	107
5.8.1	MBR Boot	107
5.8.2	UEFI Boot	108
5.8.3	How GRUB Works	108

6 HOW USER SPACE STARTS 111

6.1	Introduction to init	112
6.2	System V Runlevels	113
6.3	Identifying Your init	114
6.4	systemd	114
6.4.1	Units and Unit Types	114
6.4.2	systemd Dependencies	115
6.4.3	systemd Configuration	117
6.4.4	systemd Operation	120
6.4.5	Adding Units to systemd	122
6.4.6	systemd Process Tracking and Synchronization	123
6.4.7	systemd On-Demand and Resource-Parallelized Startup	124
6.4.8	systemd System V Compatibility	129
6.4.9	systemd Auxiliary Programs	129
6.5	Upstart	130
6.5.1	Upstart Initialization Procedure	130
6.5.2	Upstart Jobs	131
6.5.3	Upstart Configuration	133
6.5.4	Upstart Operation	137
6.5.5	Upstart Logs	138
6.5.6	Upstart Runlevels and System V Compatibility	138
6.6	System V init	139
6.6.1	System V init: Startup Command Sequence	141
6.6.2	The System V init Link Farm	142
6.6.3	run-parts	143
6.6.4	Controlling System V init	143
6.7	Shutting Down Your System	144
6.8	The Initial RAM Filesystem	145
6.9	Emergency Booting and Single-User Mode	146

7

SYSTEM CONFIGURATION: LOGGING, SYSTEM TIME, BATCH JOBS, AND USERS

149

7.1	The Structure of /etc.	150
7.2	System Logging	150
	7.2.1 The System Logger	151
	7.2.2 Configuration Files	151
7.3	User Management Files	153
	7.3.1 The /etc/passwd File	153
	7.3.2 Special Users	155
	7.3.3 The /etc/shadow File	155
	7.3.4 Manipulating Users and Passwords	155
	7.3.5 Working with Groups	156
7.4	getty and login	157
7.5	Setting the Time	157
	7.5.1 Kernel Time Representation and Time Zones	158
	7.5.2 Network Time	158
7.6	Scheduling Recurring Tasks with cron	159
	7.6.1 Installing Crontab Files	160
	7.6.2 System Crontab Files	161
	7.6.3 The Future of cron	161
7.7	Scheduling One-Time Tasks with at	161
7.8	Understanding User IDs and User Switching	162
	7.8.1 Process Ownership, Effective UID, Real UID, and Saved UID	162
7.9	User Identification and Authentication	164
	7.9.1 Using Libraries for User Information	164
7.10	PAM	165
	7.10.1 PAM Configuration	166
	7.10.2 Notes on PAM	169
	7.10.3 PAM and Passwords	170
7.11	Looking Forward	170

8

A CLOSER LOOK AT PROCESSES AND RESOURCE UTILIZATION

171

8.1	Tracking Processes	172
8.2	Finding Open Files with lsof	172
	8.2.1 Reading the lsof Output	172
	8.2.2 Using lsof	173
8.3	Tracing Program Execution and System Calls	174
	8.3.1 strace	174
	8.3.2 ltrace	176
8.4	Threads	176
	8.4.1 Single-Threaded and Multithreaded Processes	176
	8.4.2 Viewing Threads	177
8.5	Introduction to Resource Monitoring	178
8.6	Measuring CPU Time	178
8.7	Adjusting Process Priorities	179

8.8	Load Averages	180
	8.8.1 Using uptime	180
	8.8.2 High Loads	181
8.9	Memory	181
	8.9.1 How Memory Works	182
	8.9.2 Page Faults	182
8.10	Monitoring CPU and Memory Performance with vmstat	183
8.11	I/O Monitoring	185
	8.11.1 Using iostat	185
	8.11.2 Per-Process I/O Utilization and Monitoring: iotop	186
8.12	Per-Process Monitoring with pidstat	187
8.13	Further Topics	188

9

UNDERSTANDING YOUR NETWORK AND ITS CONFIGURATION

189

9.1	Network Basics	190
	9.1.1 Packets	190
9.2	Network Layers	191
9.3	The Internet Layer	192
	9.3.1 Viewing Your Computer's IP Addresses	193
	9.3.2 Subnets	194
	9.3.3 Common Subnet Masks and CIDR Notation	195
9.4	Routes and the Kernel Routing Table	195
	9.4.1 The Default Gateway	196
9.5	Basic ICMP and DNS Tools	197
	9.5.1 ping	197
	9.5.2 traceroute	198
	9.5.3 DNS and host	198
9.6	The Physical Layer and Ethernet	199
9.7	Understanding Kernel Network Interfaces	199
9.8	Introduction to Network Interface Configuration	200
	9.8.1 Manually Adding and Deleting Routes	201
9.9	Boot-Activated Network Configuration	202
9.10	Problems with Manual and Boot-Activated Network Configuration	202
9.11	Network Configuration Managers	203
	9.11.1 NetworkManager Operation	203
	9.11.2 Interacting with NetworkManager	204
	9.11.3 NetworkManager Configuration	204
9.12	Resolving Hostnames	206
	9.12.1 /etc/hosts	207
	9.12.2 resolv.conf	207
	9.12.3 Caching and Zero-Configuration DNS	208
	9.12.4 /etc/nsswitch.conf	208
9.13	Localhost	209
9.14	The Transport Layer: TCP, UDP, and Services	209
	9.14.1 TCP Ports and Connections	210
	9.14.2 Establishing TCP Connections	210
	9.14.3 Port Numbers and /etc/services	211

9.14.4	Characteristics of TCP	212
9.14.5	UDP	212
9.15	Revisiting a Simple Local Network	214
9.16	Understanding DHCP	214
9.16.1	The Linux DHCP Client	214
9.16.2	Linux DHCP Servers	215
9.17	Configuring Linux as a Router	215
9.17.1	Internet Uplinks	216
9.18	Private Networks	216
9.19	Network Address Translation (IP Masquerading)	217
9.20	Routers and Linux	218
9.21	Firewalls	219
9.21.1	Linux Firewall Basics	220
9.21.2	Setting Firewall Rules	221
9.21.3	Firewall Strategies	223
9.22	Ethernet, IP, and ARP	225
9.23	Wireless Ethernet	226
9.23.1	iw	227
9.23.2	Wireless Security	228
9.24	Summary	228

10

NETWORK APPLICATIONS AND SERVICES 229

10.1	The Basics of Services	230
10.1.1	A Closer Look	230
10.2	Network Servers	232
10.3	Secure Shell (SSH)	233
10.3.1	The SSHD Server	234
10.3.2	The SSH Client	236
10.4	The inetd and xinetd Daemons	237
10.4.1	TCP Wrappers: tcpd, /etc/hosts.allow, and /etc/hosts.deny	238
10.5	Diagnostic Tools	238
10.5.1	lsof	239
10.5.2	tcpdump	240
10.5.3	netcat	241
10.5.4	Port Scanning	242
10.6	Remote Procedure Call (RPC)	243
10.7	Network Security	243
10.7.1	Typical Vulnerabilities	244
10.7.2	Security Resources	245
10.8	Looking Forward	245
10.9	Sockets: How Processes Communicate with the Network	246
10.10	Unix Domain Sockets	247
10.10.1	Advantages for Developers	247
10.10.2	Listing Unix Domain Sockets	248

11

INTRODUCTION TO SHELL SCRIPTS 249

11.1	Shell Script Basics	249
11.1.1	Limitations of Shell Scripts	250

11.2	Quoting and Literals	251
	11.2.1 Literals	251
	11.2.2 Single Quotes	252
	11.2.3 Double Quotes	252
	11.2.4 Passing a Literal Single Quote	253
11.3	Special Variables	253
	11.3.1 Individual Arguments: \$1, \$2,	254
	11.3.2 Number of Arguments: \$#	254
	11.3.3 All Arguments: \$@	254
	11.3.4 Script Name: \$0	255
	11.3.5 Process ID: \$\$	255
	11.3.6 Exit Code: \$?	255
11.4	Exit Codes	255
11.5	Conditionals	256
	11.5.1 Getting Around Empty Parameter Lists	257
	11.5.2 Using Other Commands for Tests	257
	11.5.3 elif	258
	11.5.4 && and Logical Constructs	258
	11.5.5 Testing Conditions	258
	11.5.6 Matching Strings with case	261
11.6	Loops	262
	11.6.1 for Loops	262
	11.6.2 while Loops	262
11.7	Command Substitution	263
11.8	Temporary File Management	264
11.9	Here Documents	265
11.10	Important Shell Script Utilities	265
	11.10.1 basename	265
	11.10.2 awk	266
	11.10.3 sed	266
	11.10.4 xargs	267
	11.10.5 expr	268
	11.10.6 exec	268
11.11	Subshells	268
11.12	Including Other Files in Scripts	269
11.13	Reading User Input	269
11.14	When (Not) to Use Shell Scripts	270

12 MOVING FILES ACROSS THE NETWORK 271

12.1	Quick Copy	272
12.2	rsync	272
	12.2.1 rsync Basics	272
	12.2.2 Making Exact Copies of a Directory Structure	273
	12.2.3 Using the Trailing Slash	274
	12.2.4 Excluding Files and Directories	275
	12.2.5 Transfer Integrity, Safeguards, and Verbose Modes	276
	12.2.6 Compression	277
	12.2.7 Limiting Bandwidth	277
	12.2.8 Transferring Files to Your Computer	277
	12.2.9 Further rsync Topics	278

12.3	Introduction to File Sharing	278
12.4	Sharing Files with Samba	278
	12.4.1 Configuring the Server	279
	12.4.2 Server Access Control	279
	12.4.3 Passwords	280
	12.4.4 Starting the Server	282
	12.4.5 Diagnostics and Log Files	282
	12.4.6 Configuring a File Share	282
	12.4.7 Home Directories	283
	12.4.8 Sharing Printers	283
	12.4.9 Using the Samba Client	283
	12.4.10 Accessing Files as a Client	284
12.5	NFS Clients	285
12.6	Further Network File Service Options and Limitations	286

13

USER ENVIRONMENTS **287**

13.1	Guidelines for Creating Startup Files	288
13.2	When to Alter Startup Files	288
13.3	Shell Startup File Elements	288
	13.3.1 The Command Path	289
	13.3.2 The Manual Page Path	290
	13.3.3 The Prompt	290
	13.3.4 Aliases	290
	13.3.5 The Permissions Mask	291
13.4	Startup File Order and Examples	291
	13.4.1 The bash Shell	292
	13.4.2 The tcsh Shell	294
13.5	Default User Settings	295
	13.5.1 Shell Defaults	295
	13.5.2 Editor	295
	13.5.3 Pager	296
13.6	Startup File Pitfalls	296
13.7	Further Startup Topics	296

14

A BRIEF SURVEY OF THE LINUX DESKTOP **297**

14.1	Desktop Components	298
	14.1.1 Window Managers	298
	14.1.2 Toolkits	299
	14.1.3 Desktop Environments	299
	14.1.4 Applications	299
14.2	A Closer Look at the X Window System	299
	14.2.1 Display Managers	300
	14.2.2 Network Transparency	300
14.3	Exploring X Clients	301
	14.3.1 X Events	301
	14.3.2 Understanding X Input and Preference Settings	302
14.4	The Future of X	305

14.5	D-Bus	305
14.5.1	System and Session Instances	306
14.5.2	Monitoring D-Bus Messages	306
14.6	Printing	307
14.6.1	CUPS	307
14.6.2	Format Conversion and Print Filters	308
14.7	Other Desktop Topics	308

15 DEVELOPMENT TOOLS 309

15.1	The C Compiler	310
15.1.1	Multiple Source Files	311
15.1.2	Header (Include) Files and Directories	311
15.1.3	Linking with Libraries	313
15.1.4	Shared Libraries	314
15.2	make	318
15.2.1	A Sample Makefile	318
15.2.2	Built-in Rules	319
15.2.3	Final Program Build	319
15.2.4	Staying Up-to-Date	320
15.2.5	Command-Line Arguments and Options	320
15.2.6	Standard Macros and Variables	321
15.2.7	Conventional Targets	322
15.2.8	Organizing a Makefile	322
15.3	Debuggers	323
15.4	Lex and Yacc	324
15.5	Scripting Languages	325
15.5.1	Python	326
15.5.2	Perl	326
15.5.3	Other Scripting Languages	326
15.6	Java	327
15.7	Looking Forward: Compiling Packages	328

16 INTRODUCTION TO COMPILING SOFTWARE FROM C SOURCE CODE 329

16.1	Software Build Systems	330
16.2	Unpacking C Source Packages	330
16.2.1	Where to Start	331
16.3	GNU Autoconf	332
16.3.1	An Autoconf Example	332
16.3.2	Installing Using a Packaging Tool	333
16.3.3	configure Script Options	334
16.3.4	Environment Variables	334
16.3.5	Autoconf Targets	336
16.3.6	Autoconf Log Files	336
16.3.7	pkg-config	336
16.4	Installation Practice	338
16.4.1	Where to Install	338

16.5	Applying a Patch	339
16.6	Troubleshooting Compiles and Installations	340
	16.6.1 Specific Errors	340
16.7	Looking Forward	342

17
BUILDING ON THE BASICS **345**

17.1	Web Servers and Applications	346
17.2	Databases.	346
	17.2.1 Types of Databases	347
17.3	Virtualization.	347
17.4	Distributed and On-Demand Computing	348
17.5	Embedded Systems	348
17.6	Final Remarks	349

BIBLIOGRAPHY **351**

INDEX **355**
