PROLOGUE 1

1
WHAT IS A CELL? 15

A Cell Is a Little Sack of Life 16
Every Living Organism Is Made of Cells 16
Cells Are Alive 20
A Cell Is Made Up of Various Molecules 23
I've Never Seen a Cell! 24
The Longest Cell in Our Bodies 24
Let's Look Inside a Cell 25
Let's Penetrate the Cell Membrane 27
Cell Organelles 31
The Nucleus: A Little Brain 35
What's Inside the Nucleus? 37
Single-Celled and Multicellular Organisms 48
Prokaryotic Organisms and Eukaryotic Organisms 51

2
PROTEINS AND DNA: DECIPHERING THE GENETIC CODE 53

Proteins Drive Cellular Activity 59
What Is Cellular Activity? 59
Explosion of Enzyme Power! 61
Proteins Acting as Enzymes 69
Proteins' Role in Cell Division 70
Proteins and Muscle Contraction 71
Summary 72
Proteins Are Made of Amino Acids 73
Replacing One Amino Acid with Another Is a Big Deal! 75
Genes: The Blueprint for Building Proteins 77
How Do Cells Know What Proteins to Create? 77
Blueprints Ensure the Amino Acid Arrangement Is Correct 78
Our Genes Are Written in Code 79

The Manga Guide to Molecular Biology
(C) 2009 by Masaharu Takemura, Sakura, and Becom Co., Ltd.

DNA and Nucleotides 81
DNA Has a Double-Helix Structure 81
DNA Is Made of Nucleotides 82
Nucleotides Are the Characters in the "Code" 84
The Genome: A Library of Genes 88

3
DNA REPLICATION AND CELL DIVISION 91

Cells Multiply Through Division 92
Reproduction: The Most Important Life Event! 92
Cell Division: The Simplest Way to Reproduce 97
Cell Division Occurs in the Bodies of Multicellular Organisms 100
DNA Is Replicated Before Cell Division 105
What Happens to Genes? 105
DNA Has a Duplex Structure 106
DNA Polymerase's Role in DNA Replication 108
What Is a Chromosome? 122
The Human Body Contains 24 Chromosomes 123
Chromosomes Are Only Visible at the Time of Cell Division 123
Dynamic Cell Division 124
Mitosis 124
Cytokinesis 127
What Is a Cell Cycle? 128
What Causes Cancer? 130

4
HOW IS A PROTEIN MADE? 131

A Gene Becomes Useful After Transcription 132
How a Protein Is Made 132
What Is Transcription? 138
Chromatin and Transcription 144
Try Pulling a Telephone Cord 144
mRNA Is Synthesized Using One of the DNA Strands as the Template 146
RNA Polymerase Copies Genetic Information 148
Trimming the Transcribed mRNA 153
Exon Shuffling 155
What Is RNA? 156
Characters of RNA 156
DNA and RNA Use Different Sugars 158
RNA Is Flexible 160
There Are Many Types of RNA 161
Transfer RNA 165
Ribosome: The Protein Synthesis Mechanism 165
Mechanics of the Genetic Code 167
tRNA Transfers Amino Acids 170
The Protein Is Complete 174

The Manga Guide to Molecular Biology
(C) 2009 by Masaharu Takemura, Sakura, and Becom Co., Ltd.

5
GENETIC TECHNOLOGY AND RESEARCH 175

What Is Genetic Recombination Technology? 176
Manipulating DNA. 181
Breed Improvement and Genetic Recombination Technology 183
An Example of Genetic Recombination Technology 187
Methods for Detecting and Isolating DNA 191
Transgenic Animals (Knockout Mouse) 192
Personalized Medicine and Gene Therapy: Are Genetics the Future of Disease Prevention? . . . 196
Gene Therapy 198
The RNA Renaissance. 201
RNA Interference: Using RNA to Alter Gene Expression 201
Can RNA Cure Diseases? 203
How Exactly Does PCR Work? 203
How to Produce Cloned Animals. 205
Molecular Evolution: How Genes Can Tell a Story 208
The Future of Molecular Biology 209

EPILOGUE 210

INDEX 219

The Manga Guide to Molecular Biology
(C) 2009 by Masaharu Takemura, Sakura, and Becom Co., Ltd.
