

contents in detail

acknowledgments	xiii
------------------------------	-------------

1

CandyPicker: a candy-picking robot with built-in generator and remote control 1

building the CandyPicker.....	2
the base.....	3
the tall tower and the turntable.....	6
the generator.....	11
the arm.....	14
programming the CandyPicker.....	18
further exploration.....	18

2

PunchBot: old-school programming using your NXT 19

building PunchBot.....	21
the main body.....	22
the motor and wheels.....	31
the caster.....	34
connecting the cables.....	35
punch card instructions.....	36
programming PunchBot.....	36
further exploration.....	47
modifications to PunchBot.....	47
modifications to PunchBot's program.....	47
internet resources.....	47

3

m: the m&m sorter..... 49

building m.....	52
the brick.....	53
the motor driving the collector.....	54
the motor driving the scanner unit.....	57
the collector.....	60
the scanner unit.....	67
the store.....	70
the store's cover.....	79
programming m.....	81
determine the reflection values for each candy color.....	81
the program for the sorter.....	82
my block #1—dropping an m&m from the store.....	83
my block #2—determining the color of the m&m.....	83
my block #3—scanning the m&m.....	87

my block #4—sorting.....	88
my block #5—releasing the m&m	92
my block #6—resetting the connector	92
main program	93
running the program	94
further exploration.....	95
check for an empty store	95
use a color sensor.....	95
enhance the collector unit.....	95
enhance the store.....	95

4
NXT dragster: the NXT STEP dragster challenge 97

building the NXT dragster.....	98
programming the NXT dragster.....	122
making the drag strip.....	128
staging a drag run.....	128
following a typical drag run	129
measuring time.....	130
recording time.....	130
the starter series rules.....	130
going faster starts in the pits	131
further exploration.....	132
conclusion.....	132

5
BobBot: an NXT version of the bobcat 133

building BobBot.....	134
the right gear base.....	135
the right base	137
the light sensor	139
the left gear base	142
the left base	144
the ultrasonic sensor.....	146
test BobBot's base	148
the left side cabin	149
the worm gear.....	151
the sound sensor	153
the arm motor	155
the rear fender	156
the exhaust pipe	159
the touch sensor	160
the right cabin	163
the rear lights.....	164
the top lights.....	165
connecting the cables.....	166
the cabin door.....	167
the arms.....	169

the ball gripper.....	172
the ball holder.....	178
optional accessory building instructions	180
programming BobBot.....	188
further exploration.....	197

6

RoboLock: a security system for your robots	199
building RoboLock	200
the light sensor module	201
the ultrasonic sensor module.....	202
the sentry module.....	203
the front wall	207
RoboLock	209
connecting the cables.....	216
getting a secure card.....	216
programming RoboLock	217
my block #1—code reader.....	217
my block #2—menu.....	222
main program.....	226
troubleshooting tips.....	240

7

the hand: a robot for those dirty jobs	243
building the hand.....	245
the NXT base.....	246
the main frame	246
the handle.....	250
the hand.....	254
connecting the cables.....	262
programming the hand.....	263
further exploration.....	269
building modifications for the hand.....	269
programming modifications for the hand.....	269

8

SPC: the self-parking car	271
building SPC.....	272
the front.....	273
the brick and ultrasonic sensor	284
the rear	285
connecting the cables.....	291
programming SPC.....	292
my block #1—steer right.....	292
my block #2—steer left	294
my block #3—steer forward	295
main program.....	297
further exploration.....	302

9		
	GrabBot: a robot that finds, grabs, lifts, and moves	303
	building GrabBot.....	304
	the grabber	305
	the grabber motor.....	311
	the driving motors.....	317
	the rear frame.....	319
	the caster wheel	320
	the ultrasonic sensor	323
	the brick	325
	the sound sensor	327
	the light sensor	329
	connecting the cables.....	331
	programming GrabBot.....	332
	my block—search.....	332
	main program.....	339
	further exploration.....	346
10		
	the bike: an NXT bicycle that can steer and move by itself	349
	building the bike.....	350
	the handlebar and the front fork.....	360
	the drive and the gear train	362
	the seat	369
	the wheel and drive motors.....	371
	the final assembly	375
	connecting the cables.....	380
	programming the bike.....	381
	initialization.....	381
	obstacle avoidance and drive control.....	382
	steering control.....	383
	further exploration.....	388
