

CONTENTS IN DETAIL

ACKNOWLEDGMENTS **xiv**

INTRODUCTION **xv**

What Is the Current State of DevOps?	xvi
Who Should Read This Book?	xvii
How This Book Is Organized	xvii
Part I: Infrastructure as Code, Configuration Management, Security, and Administration	xvii
Part II: Containerization and Deploying Modern Applications	xviii
Part III: Observability and Troubleshooting	xviii
What You'll Need	xviii
Downloading and Installing VirtualBox	xx
Companion Repository	xxi
Editor	xxi

PART I: INFRASTRUCTURE AS CODE, CONFIGURATION MANAGEMENT, SECURITY, AND ADMINISTRATION **1**

1 **SETTING UP A VIRTUAL MACHINE** **3**

Why Use Code to Build Infrastructure?	3
Getting Started with Vagrant	4
Installation	4
Anatomy of a Vagrantfile	5
Basic Vagrant Commands	6
Getting Started with Ansible	6
Installation	7
Key Ansible Concepts	7
Ansible Playbook	8
Basic Ansible Commands	9
Creating an Ubuntu VM	9
Summary	11

2 **USING ANSIBLE TO MANAGE PASSWORDS, USERS, AND GROUPS** **13**

Enforcing Complex Passwords	14
Installing libpam-pwquality	14
Configuring pam_pwquality to Enforce a Stricter Password Policy	15
Linux User Types	16
Getting Started with the Ansible User Module	16
Generating a Complex Password	17

Linux Groups	18
Getting Started with the Ansible Group Module	18
Assigning a User to the Group	19
Creating Protected Resources	19
Updating the VM	20
Testing User and Group Permissions	21
Summary	23

3 USING ANSIBLE TO CONFIGURE SSH 25

Understanding and Activating Public Key Authentication	26
Generating a Public Key Pair	26
Using Ansible to Get Your Public Key on the VM	27
Adding Two-Factor Authentication	28
Installing Google Authenticator	29
Configuring Google Authenticator	29
Configuring PAM for Google Authenticator	30
Configuring the SSH Server	31
Restarting the SSH Server with a Handler	32
Provisioning the VM	33
Testing SSH Access	34
Summary	35

4 CONTROLLING USER COMMANDS WITH SUDO 37

What Is sudo?	38
Planning a sudoers Security Policy	38
Installing the Greeting Web Application	39
Anatomy of a sudoers File	41
Creating the sudoers File	42
The sudoers Template	43
Provisioning the VM	44
Testing Permissions	45
Accessing the Web Application	45
Editing greeting.py to Test the sudoers Policy	46
Stopping and Starting with systemctl	46
Audit Logs	47
Summary	48

5 AUTOMATING AND TESTING A HOST-BASED FIREWALL 49

Planning the Firewall Rules	50
Automating UFW Rules	50
Provisioning the VM	53
Testing the Firewall	54
Scanning Ports with Nmap	55
Firewall Logging	56
Rate Limiting	57
Summary	58

PART II: CONTAINERIZATION AND DEPLOYING MODERN APPLICATIONS **59**

6 **CONTAINERIZING AN APPLICATION WITH DOCKER** **61**

Docker from 30,000 Feet	62
Getting Started with Docker	62
Dockerfile Instructions	63
Container Images and Layers	64
Containers	64
Namespaces and Cgroups	64
Installing and Testing Docker	65
Installing the Docker Engine with Minikube	65
Installing the Docker Client and Setting Up Docker Environment Variables	66
Testing the Docker Client Connectivity	66
Containerizing a Sample Application	66
Dissecting the Example telnet-server Dockerfile	67
Building the Container Image	68
Verifying the Docker Image	69
Running the Container	70
Other Docker Client Commands	71
exec	71
rm	72
inspect	72
history	73
stats	74
Testing the Container	74
Connecting to the Telnet-Server	74
Getting Logs from the Container	75
Summary	76

7 **ORCHESTRATING WITH KUBERNETES** **77**

Kubernetes from 30,000 Feet	78
Kubernetes Workload Resources	79
Pods	79
ReplicaSet	79
Deployments	79
StatefulSets	80
Services	80
Volumes	80
Secrets	81
ConfigMaps	81
Namespaces	81
Deploying the Sample telnet-server Application	82
Interacting with Kubernetes	82
Reviewing the Manifests	82
Creating a Deployment and Services	87
Viewing the Deployment and Services	88

Testing the Deployment and Services	89
Accessing the Telnet Server	89
Troubleshooting Tips	91
Killing a Pod.	92
Scaling	92
Logs	93
Summary	94

8 DEPLOYING CODE 95

CI/CD in Modern Application Stacks	96
Setting Up Your Pipeline	97
Reviewing the skaffold.yaml File	98
Reviewing the Container Tests.	99
Simulating a Development Pipeline	100
Making a Code Change	102
Testing the Code Change	103
Testing a Rollback	104
Other CI/CD Tooling	105
Summary	106

PART III: OBSERVABILITY AND TROUBLESHOOTING 107

9 OBSERVABILITY 109

Monitoring Overview	110
Monitoring the Sample Application	111
Installing the Monitoring Stack	112
Verifying the Installation	113
Metrics	115
Golden Signals.	115
Adjusting the Monitoring Pattern	115
The telnet-server Dashboard	116
PromQL: A Primer	118
Alerts	119
Reviewing Golden Signal Alerts in Prometheus	119
Routing and Notifications.	121
Summary	123

10 TROUBLESHOOTING HOSTS 125

Troubleshooting and Debugging: A Primer	126
Scenario: High Load Average	127
uptime	127
top	128
Next Steps	129

Scenario: High Memory Usage	129
free	129
vmstat	130
ps	131
Next Steps	131
Scenario: High iowait.	131
iostat	132
iotop	133
Next Steps	133
Scenario: Hostname Resolution Failure	133
resolv.conf	134
resolvectl	135
dig	136
Next Steps	137
Scenario: Out of Disk Space	138
df	138
find	138
lsdf	139
Next Steps	139
Scenario: Connection Refused	140
curl	140
ss	140
tcpdump	141
Next Steps	142
Searching Logs	142
Common Logs.	143
Common journalctl Commands	144
Parsing Logs	146
Probing Processes	148
strace	148
Summary	151

INDEX
