## Symbols

- + (addition operator), 28–29
- @ (at sign), 27
- \$ (dollar sign), 14
- # (hash mark), 50
- | (pipe operator), 38
- .. (range operator), 28
- \* (wildcard character), 10

## A

- About topics, 9–10
- AccountInactive parameter, 141
- Active Directory (AD) domain, 101–102, 242–252
- ActiveDirectory module
  - Get commands, 139–140
  - groups, 145–146
  - installing, 138
  - objects, 139–149
  - string formatting, 147
  - syncing processes, 149–155
- AD forest creation, 242–245
- ad hoc commands, 93
- Add() method, 30, 32–33
- Add-Computer command, 256
- Add-Content cmdlet, 8–9
- addition operator (+), 28–29
- Administrator role, 11, 219
- aliases, 4–5
- All Users modules, 82
- AllSigned execution policy, 42
- Amazon Relational Database Service (Amazon RDS), 188
- Amazon Web Services (AWS)
  - authentication, 174–178
  - AWS EC2 Instances, 178–183
  - Elastic Beanstalk (EB) applications, 184–188
  - IAM Best Practices guide, 177
  - SQL Server Databases, 188–191
- App service plans, 167–168

- Append parameter, 125, 128
- application pools, 280–281
- ArgumentList parameter, 95–96
- ArrayLists, 29–31
- arrays, 26–29
- assertions, 110–111
- asterisk (\*), 10
- at sign (@), 27
- attributes, 150–151, 155
- authentication
  - Amazon Web Services (AWS), 174–178
  - Microsoft Azure, 158–161
  - PowerShell remoting
    - authentication, 101–105
- automatic error variables, 66
- automatic variables, 16–19
- AWS EC2 Instances, 178–183
- Az module, 158
- Azure SQL databases, 168–172
- Azure virtual machines, 161–167
- Azure web apps, 167–168

## B

- banks of RAM, 204
- bash, 38
- best practices
  - Don't Repeat Yourself (DRY), 54, 210
  - naming conventions, 220
  - parameters, 236
  - refactoring code, 266–272
- binary modules, 79
- bools and booleans, 12–20
- break keyword, 53
- built-in prefixes, 220

## C

- casting variables, 21, 72
- certificate stores, 281–282
- CimSession parameter, 210–212
- classes, 23–24

- cloud resources
    - Amazon Web Services (AWS), 174–191
    - Microsoft Azure, 158–172
  - cls command, 5
  - cmd.exe commands, 5, 38
  - cmdlets
    - Add-Content, 8–9
    - ConvertFrom-Json, 132
    - ForEach-Object, 55–56
    - vs. functions, 70
    - Get-Content, 39
    - Get-Help, 8–9
    - Get-Member, 25
    - Get-Module, 80–81
    - Invoke-RestMethod, 134
    - Invoke-WebRequest, 134
    - Measure-Object, 199–201
    - overview, 6
    - Search-ADAccount, 141
    - Test-Connection, 49–50
  - code refactoring, 266–272
  - COM objects, 126
  - commands
    - ad hoc commands, 93
    - Add-Computer, 256
    - cls, 5
    - cmd.exe commands, 5, 38
    - Connect-PSSession, 99–100
    - ConvertFrom-SecureString, 160
    - core commands, 9–10
    - dir, 5
    - Disconnect-PSSession, 99
    - DOS commands, 4–5
    - Enable-WsManCredSSP, 103
    - Enter-PSSession, 98
    - Export-Csv, 122
    - Export-Excel, 126
    - Find-Module, 86–87
    - Get commands, 139–140
    - Get-Alias, 5
    - Get-Commands, 6–7
    - Get-PSSession, 99
    - Get-Service, 37–41
    - Get-Variable, 16
    - Get-Vm, 223
    - help, 8
    - Import-Csv, 118–121
    - Import-Excel, 127–128
    - Invoke-Command, 93–94, 98, 100
    - Invoke-Pester, 111
    - New-Object, 33–34
    - New-PSSession, 97
    - overview, 4–8
    - Remove-PSSession, 101
    - Resolve-DnsName, 124
    - Select-Object, 24, 128
    - Set-Variable, 15–16
    - Start-Service, 38–40
    - Test-Connection, 123–124
    - Where-Object, 208
  - comments, 50
  - common parameters, 63
  - community scripts, 234
  - comparison operators, 49–50
  - Compress parameter, 133
  - ComputerName parameter, 41
  - conditional logic, 235
  - conditional statements, 49–54
  - Connect-AzAccount, 158–160
  - Connect-PSSession command, 99–100
  - console, 4
  - contains operator, 49
  - ContainsKey() method, 33
  - context blocks, 109
  - control flow, 48
  - conversion scripts, 233
  - ConvertFrom-Json cmdlet, 132
  - ConvertFrom-SecureString command, 160
  - core commands, 9–10
  - credentials, 237–238, 243–244
  - CredSSP, 101–105
  - CSV files, 118–126
  - curly brackets, 70
  - Current User modules, 82
  - custom objects, 33–34
- ## D
- data structures, 26–33
  - data types, 19–23
  - DelegateComputer parameter, 103
  - delimiters, 118
  - describe blocks, 109
  - Description parameter, 145
  - dictionary, 31
  - dir command, 5
  - Disconnect-PSSession command, 99
  - documentation, 8–10
  - dollar sign (\$), 14
  - domain controllers, 242
  - Don't Repeat Yourself (DRY), 54, 210
  - DOS commands, 4–5
  - dot notation, 24

- dot sourcing, 233
- double hop problem, 102–105
- Double type, 21
- double vs. single quotes, 22–23
- do/while and do/until loops, 58–59
- dynamic modules, 79

## E

- EC2 Instances, 178–183
- Elastic Beanstalk (EB) applications, 184–188
- else statements, 51
- elseif statements, 51–52
- Enabled condition, 142–143
- Enable-WsManCredSSP command, 103
- encrypted credentials, 237–238, 243–244
- Enter-PSSession command, 98
- eq operator, 49
- error messages, 6, 19
- \$Error variable, 66
- ErrorAction parameter, 63–64, 223
- \$ErrorActionPreference variable, 64
- errors, 62–63
- Excel spreadsheets, 126–131, 246–247
- exceptions, 62–63
- execution policy, 42–43
- exit codes, 17–18
- expansion, 23
- Export-Csv command, 122
- Export-Excel command, 126
- external scripts, 42–46

## F

- FilePath parameter, 94
- Filter parameter, 139–140, 206
- Find-Module command, 86–87
- Finke, Doug, 126
- firewall rules, 170–171
- Float type, 21
- floating-point data types, 21
- for loops, 57
- foreach loops, 54–56, 202–203
- foreach() method, 56
- ForEach-Object cmdlet, 55–56
- forest creation, 242–245
- FreeSpace, 202
- full sessions, 96–101
- functions
  - adding parameters, 71–76
  - vs. cmdlets, 70

- helper functions, 262
- naming conventions, 220
- overview, 6, 70–71
- pipeline capabilities, 76–78

## G

- Gallery, 86, 108, 126
- Get commands, 139
- Get-Alias command, 5
- Get-Command, 6–7
- Get-Content cmdlet, 39
- Get-Help cmdlet, 8–9
- Get-Member cmdlet, 25
- Get-Module cmdlet, 80–81
- Get-PSSession command, 99
- Get-Service command, 37–41
- Get-Variable command, 16
- Get-Vm command, 223
- groups, 145–146
- GroupScope parameter, 145
- gt operator, 49

## H

- hard drive space, 202
- hash mark (#), 50
- hashtables, 31–33, 124
- help command, 8
- help system, 10
- helper functions, 81, 262
- Hyper-V, 218–219

## I

- IAM service, 174–178
- idempotency, 222
- Identity parameter, 141
- if/then statements, 50–51
- IIS web servers, 275–283
- Import-Csv command, 118–121
- Import-Excel command, 127–128
- ImportExcel module, 126, 246–247
- infrastructure tests, 108
- instance class options, 190
- integer data types, 20–21
- Integrated Scripting Environment (ISE), 44–45
- interactive sessions, 98–99
- internet gateways, 179–180
- interpolation, 23
- Invoke-Command, 93–94, 98, 100

- Invoke-Pester command, 111
- Invoke-RestMethod cmdlet, 134
- Invoke-WebRequest cmdlet, 134
- IP addresses, 163, 206–208
- IPEnabled property, 206–208
- ISE (Integrated Scripting Environment), 44–45
- it blocks, 110
- iterations, 54

## J

- JavaScript Object Notation (JSON)
  - data, 131–136

## K

- Kerberos, 101–102
- key-value pairs, 31

## L

- LABDC VM
  - AD-Domain-Services installation, 242–243
  - creating, 223–224
- \$LASTEXITCODE variable, 17–18
- le operator, 49
- length values, 199–201
- line breaks, 133
- ListAvailable parameter, 81
- local sessions, 96
- local variables, 95
- locally redundant storage accounts, 164
- loops, 54–59, 196
- lt operator, 49

## M

- Mandatory keyword, 73
- Mandatory parameter, 245
- \$MaximumHistoryCount variable, 14
- Measure-Object cmdlet, 199–201
- members, 25
- members of a group, 145
- Memory, 203–205
- methods, 23, 25–26
- Microsoft Active Directory (AD). *See* ActiveDirectory module
- Microsoft Azure
  - authentication, 158–161
  - Azure SQL databases, 168–172

- Azure virtual machines, 161–167
- Azure web apps, 167–168
- Microsoft.PowerShell.Management
  - module, 83
- modular code, 265
- module containers, 88
- module manifests, 84–85, 88, 219–220
- modules
  - Az module, 158
  - components, 84–85
  - creating, 88–89
  - custom modules, 86–88
  - default, 80–83
  - downloading, 86–87
  - Get commands, 139
  - ImportExcel module, 126
  - importing, 82–83
  - installing, 87
  - PSADSync module, 155
  - removing, 83
  - uninstalling, 88

## N

- Name parameter, 7
- naming conventions, 220
- ne operator, 49
- network information, 205–208
- network stacks, 162–163
- New-Object command, 33–34
- New-PowerLabSqlServer, 266–269
- New-PSSession command, 97
- nonterminating errors, 62–64
- not operator, 50
- NoTypeInfoInformation parameter, 122–123
- \$null variable, 16–17

## O

- objects
  - ActiveDirectory module, 139–149
  - COM objects, 126
  - custom objects, 33–34
  - ForEach-Object cmdlet, 55–56
  - JavaScript Object Notation (JSON), 131–136
  - Measure-Object cmdlet, 199–201
  - New-Object command, 33–34
  - overview, 23–26
  - PSCustomObjectType type, 33–34
  - Select-Object command, 24, 128
  - Where-Object command, 208

- operating system images, 164–166
- operating systems information, 202–203
- operating systems installation
  - encrypted credentials, 237–238
  - OS deployments, 232–236
  - Pester tests, 239–240
  - PowerShell Direct, 238–239
  - prerequisites, 231–232
  - SQL server databases, 254–255
- organizational units (OUs), 148
- OS deployments, 232–236

## P

- param blocks, 72
- parameters
  - AccountInactive, 141
  - adding to functions, 71–76
  - Append, 125, 128
  - ArgumentList, 95–96
  - attributes, 72–74
  - binding, 40–41
  - CimSession, 210–212
  - common, 63
  - Compress, 133
  - ComputerName, 41
  - DelegateComputer, 103
  - Description, 145
  - ErrorAction, 63–64, 223
  - FilePath, 94
  - Filter, 139–140, 206
  - GroupScope, 145
  - Identity, 141
  - ListAvailable, 81
  - Mandatory, 245
  - Name, 7
  - NoTypeInfoInformation, 122–123
  - overview, 6–7
  - parameter sets, 269–272
  - positional, 10
  - Role, 103
  - ServerType, 269
  - use of, 236
